

## USTS SureFire Rechargeable Upgrade Kit Instructions

**WARNING:** The charger supplied in the kit is designed for charging 3.7V lithium-ion batteries only! DO NOT attempt to charge primary lithium batteries such as the CR123's supplied with the light. **Attempting to charge non-rechargeable batteries can lead to serious injuries as the batteries can explode.**

**NOTE:** The charger is supplied with two spacers for charging rechargeable 123 size lithium-ion batteries (RCR123).

### Step 1:

Remove kit from packaging; remove components from packaging.

### Step 2:

Plug in the charger and install the battery to charge, making sure the battery is installed correctly (+ to +, - to -). If red LED charge light does not come on, check the battery orientation in the charger and make sure the charger is plugged in. Once fully charged, the LED charge light will change to green.

### Step 3:

Remove the stock SureFire bulb assembly and CR123 batteries from your light. Keep these stored as a backup to change the light to a non-rechargeable configuration.

### Step 4:

Install the bulb assembly from the kit; install the fully charged lithium-ion battery. make sure the + markings are toward the bulb and the - towards the tail cap. NOTE: The battery will fit snugly and may need to be loaded from the bulb side of the light.

### Step 5:

Use your light and enjoy the freedom of rechargeable batteries.
